Agency

The following identity presents a framework for the evaluation of macroeconomic value.

$$\begin{aligned} \text{power} &= \frac{\text{work}}{\text{time}} \\ \text{agency} &= \text{power} \end{aligned}$$

Power as work effort is physical. Agency as the capacity to be productive and effective is metaphysical.

Economics

Agency is a component of macroeconomic value. In this century, the equivalence of *metaphysical agency* and *macroeconomic value* serves our sustenance and maintenance.
