Power

Metaphysical power is an analytical abstraction.

$$\text{power} = \frac{\text{work}}{\text{time}}$$

The assertion of “power” as a metaphysical tangible negates the effective and temporal character of the metaphysical identity.

Metaphysics

In politics, power has become the opiate of the masses. Its sight causes the rage of frustration at the negation of veracity, which rage has been turned to a directed force weapon to shield and protect the offender.

Politics

For example, the case of “executive power” in the national politics of the United States has inflamed the issue to an extremity that is presently on display.

The executive Power shall be vested in a President of the United States of America.

U.S. Const, Art. 2, Sec. 1, Par. 1.

This constitutional structure may reflect the monarch, familiar in the eighteenth century. An ostensible benefit to government would be in politics.

This benefit to government would contrast a singular executive to the members of the two houses of Congress. When many members of equivalent rank may lack political potency, a President may preside over periodic political quagmires to illuminate substance and significance.

The Constitution encodes such potency according to its familiarity with ethical conduct.
